

8 Tail Fibers

Overview

Nylon-8 tails are fabricated from continuous filament, heat and light resistant nylon (polyamide) 6 or 6. Timm Flex 8 Tail is our updated range of 8-strand Polyamide (often referred to as nylon) tails, designed for special applications that require higher elongation properties. Timm Flex 8 Tails are compliant with OCIMF MEG 4 and SIRE 2. NIKA-POLYESTER mooring tails are made of 100% high tenacity marine grade NIKA-Polyester fibers in a 8 strand construction. They have high elongation characteristics that make. MaxiGold Super is an 8 Strand floating mooring tail with an excellent shock absorption and energy in the mooring system. They are MEG - 4 certified available in 11M & 22M sizes. The additional elasticity reduces the loads induced in wire mooring lines under dynamic loadings by permitting the ship to respond more favorably to various combinations of wind, wave.
