

Circuitous Fiber Optic Channel

Overview

It is a high-speed fibre channel topology in which fibre channel ports/hubs use arbitration to establish a point-to-point circuit and prevent multiple ports/hubs from sending frames at the same time. Here devices are connected in a one-way ring. Fibre Channel (FC) is a high-speed data transfer protocol providing in-order, lossless delivery of raw block data. Fibre Channel networks form a. The enormous potential of the fiber-optic channel to transmit data over long distances at high rates has been gradually unlocked by means of a number of key technological innovations underpinned by the mature understanding of lightwave propagation in optical fibers. It supports data backup and replication. These circuits rely on the transmission of light through thin, flexible fibers made of glass or plastic. It begins with a discussion of how the global telegraph network reflected colonial interests between the 1850s and the. "The Fibre Channel Industry Association (FCIA) is a mutual benefit, non-profit, international organization of manufacturers, system integrators, developers, vendors, industry professionals, and end users.
