

Common Fiber Optic Patch Cords

Overview

Single mode fiber patch cord: Single mode 9/125um optic patch cord are designed for long-distance transmission. They have a smaller core diameter (typically 9 microns) compared to multimode optical patch cord. Sin. Single mode fiber patch cord: Single mode 9/125um optic patch cord are designed for long-distance transmission. They have a smaller core diameter (typically 9 microns) compared to multimode optical patch cord. Single mode fiber patch cord are commonly used in applications such as long-haul telecommunications, data centers, and high-speed internet co. Fiber optic patch cords are one of the most widely used basic components in optical communications. A fiber optic cable with a fiber connector at both ends is called a fiber optic patch cord. The optical patch lead passive components for realizing the active connection of different devices and systems in optical fiber communication and are an import. PC (Physical Contact): PC fiber connectors have a curved or domed end-face that makes physical contact with the mating fiber connector. APC (Angled Physical Contact): APC fiber connectors have an angled end-face that causes a slight angle to the fiber, reducing back reflections. UPC (Ultra Physical Contact): UPC fiber connectors also have a curved.
