

# Pipeline Tray Construction Plan

## Overview

Initial steps in the planning process include determination of demand from refineries, pipeline design, route alternatives and selection, environmental assessments, public consultation, landowner negotiations and government permitting. Once these steps are complete, the. have done well for over 65 years. Our energy infrastructure assets are essential to millions of people across North America who rely on the energy we deliver every day to heat their homes, cook ted safely and reliably every day. Our priority is to make sure our employees and contractors make it. Planning for new capacity must begin far in advance of transporting the first barrel of oil, refined petroleum product, or first cubic foot of natural gas. They are essential for supporting and protecting cables, pipelines, and other facilities that form the backbone of modern cities. Resource Values and Environmental Concerns 8. (2) Crews begin to prepare for construction.
