

What is the ideal length for fiber optic fusion splice cutters

Overview

In general, the recommended strip length will be between 10 and 20 mm depending on the specifications of the specific fusion splicer. KEYFIBRE provides a range of fiber optic splicers and fusion splicers for use in the field, core networks, access networks and LANs and can provide support with training where needed. KEYFIBRE tool kits provide technicians with high quality tools essential for completing the tasks required for. Fusion splicing refers to a method of joining two optic fibers together by means of heat, often an electric arc, which fuses the glass ends. It is the technique that has the least insertion loss and almost no back reflection, hence ensuring strong connections over a long period. All three can work equally well, and most techs choose the. The Telecommunications Industry Association (TIA-568. Before you begin, you'll need: Pro Tip: Always use manufacturer-recommended consumables. 1dB for fusion) and degrade over time in outdoor environments.
