

# What to do if a router isn't included when installing fiber optic cable

## Overview

While fiber internet does not require a modem, it does need specific equipment to function properly. Let's go over them one by one. There's a good reason fiber internet is often called the "future of the internet." Fiber internet is the quickest high-speed connection that exists and uses optical fibers instead of copper cables. With speeds up to 1,000 megabits per second, it can handle multiple online activities at once with little to no lag time - making it perfect for streaming. It's essential to understand that routers and ISPs cannot communicate directly with each other because they utilize different types of signals or languages. In the same way that a human translator helps two people who don't speak the same language, a modem serves as a translator between the two, so they can communicate effectively. So does fiber int. So, to summarize —you don't need a modem for fiber internet. Instead, ONTs are used in fiber internet and act as the translator between your ISP and router because they can't communicate directly since they use different types of signals or languages. Your router then helps create the network inside your house. Other than ONTs, you also need fiber-o.
